

A WORKSPACE FOR REDEMPTIVE TECH TEAMS

Build in **rhythm**, not just in sprints.

Liturgy is the agile workspace that runs your team through the FaithTech Playbook — the **4D Cycle** as its spine and the **5R co-creation loop** inside every build. The process isn't a poster on the wall. It's enforced at every gate.

"Unless the Lord builds the house, the builders labor in vain."

PSALM 127:1

The framework is beautiful. Keeping it is hard.

Many teams adopt a redemptive framework with real conviction — and then watch it evaporate under sprint pressure. The discernment step gets skipped "just this once." The gratitude practice becomes a retro item nobody reads. Within a quarter, the Playbook is a poster on the wall and the team is back to shipping tickets.

Liturgy's answer is enforcement. The workspace itself holds the rhythm: a phase stays locked until the one before it is truly finished, a decision must be recorded before a single card is built, and no work item can be called done until all five movements of co-creation are logged. The tool doesn't remind your team of the process — it **is** the process.

Your process forms your team. Choose one worth being formed by.

WHAT LITURGY IS

01

An agile workspace

Projects, sprints, Kanban boards, story points, and members — everything a development team already expects, in one shared workspace.

02

The FaithTech Playbook, enforced

The 4D Cycle governs every project and the 5R loop governs every card. Gates are hard: they name what's missing and stay locked until it's complete.

03

Built for working together

Every project lives in one workspace, teammates join by email invitation, and boards update live as work moves — no refresh, no stale state.

The 4D Cycle: four movements, in order.

01 — Discover Reorient through the lens of Christ. Lament. Understand who the problem touches most.	02 — Discern Seek God's wisdom, then decide: Reject, Receive, Reimagine, or Create.
03 — Develop Build in sprints while running the 5R loop — Request, Receive, Review, Render, Rejoice.	04 — Demonstrate Redefine impact as friendship compounded by time, not speed shipped.

HARD GATES BETWEEN PHASES

A phase stays locked until the one before it is truly finished — artifacts complete, decision recorded, goal set. When a gate is blocked, the dashboard says so, names what's missing, and points at the door.

Discern is a real decision, not a formality: **Reject · Receive · Reimagine · Create** — recorded, owned, and impossible to skip past.

The 5R loop: a ritual inside every card.

Every work item runs the five movements of co-creation, logged one at a time — like canonical hours, a small liturgy repeated until the work is whole. Each card on the board carries its progress as five small pips, and **Done stays locked until all five are logged**.

1

Request — invite the Spirit into the work

Name what you're seeking before you start. A short, honest ask.

2

Receive — wait, and write down what comes

Capture the ideas, nudges, and constraints that surface — without editing them yet.

3

Review — synthesize what emerged

Shape the raw ideas into a direction the team can build.

4

Render — build toward what you saw

Make it real. Link the work and note what the build taught you along the way.

5

Rejoice — give thanks for what was made

Name the good in what came about, and who it serves. Rejoice closes the loop.

THE BOARD

Kanban with a conscience.

A familiar agile board — backlog, loop, review, done — where every card shows its 5R pips at a glance. The Done column is a gate, not a column: a card can only enter once all five movements are logged.

ENFORCEMENT, SURFACED

The workspace dashboard gathers every blocked gate into one feed, so the team always knows where attention is owed.

Wellspring · Discern → Develop

Sprint goal not yet defined. Develop stays locked until it is.

Lantern · card LAN-24 can't reach Done

Render and Rejoice not logged. Two of five movements remain.

One workspace. Every project. Always current.

Run every initiative in one shared workspace — from the lament workshop in Discover to the gratitude wall in Demonstrate. The dashboard plots each project on the cycle, so a glance tells you where every team is and which gates need attention.

Collaboration is live: when a teammate moves a card, logs a movement, or opens a gate, everyone sees it the moment it happens. Teammates join by email invitation, and each workspace's projects are visible only to its members.

17 weeks

of friendship compounded — Demonstrate measures relationships over time, not tickets over sprints

"They knew my name the second week."

Caller · Lantern

Built in, not bolted on.

See every project on the cycle

A dashboard that plots every project on the 4D cycle and surfaces blocked gates first.

Decide before you build

A real decision — Reject, Receive, Reimagine, or Create — recorded, owned, and impossible to skip past.

A ritual inside every card

Request, Receive, Review, Render, Rejoice — five movements captured one at a time.

Four movements, in order

Discover, Discern, Develop, Demonstrate — each phase locked until the one before it is complete.

Kanban with a conscience

The agile board your team knows, where Done stays locked until all five R's are logged.

Measure love, not velocity

Demonstrate reframes impact as friendship compounded by time — stories and gratitude alongside the numbers.

GETTING STARTED

1

Create a workspace

Sign up and your team's workspace is ready — no setup, no configuration.

2

Start a project in Discover

Every project begins with seeing clearly. The gates take it from there.

3

Invite your team

Send email invitations and work the rhythm together, live.

Begin the first movement.

Create a workspace, invite your team, and let the rhythm carry the work.

"Whatever you do, work at it with all your heart, as working for the Lord."

COLOSSIANS 3:23
